Quad Cities Generating Station

Exelon Nuclear, a business unit of Exelon Generation, owns and operates the largest nuclear fleet in the nation and the third largest fleet in the world, including Quad Cities Generating Station in Cordova, Illinois.

Nuclear energy represents approximately 20 percent of the United States electricity needs every day. Quad Cities Generating Station has been producing safe, clean and reliable nuclear energy since 1973.

Quad Cities Station is a dual unit boiling water reactor plant. It is co-owned by Exelon Generation Company (75%) and MidAmerican Energy (25%). Exelon Nuclear operates the plant, which produces enough electricity to power 1.2 million homes.

The station currently employs over 800 Exelon Nuclear employees including the Exelon Nuclear Security force. The station is operated 24 hours a day, 365 days a year by this team of dedicated and highly trained professionals.

The station is licensed to operate by the U.S. Nuclear Regulatory Commission (NRC). Each of the 100 operating nuclear power plants in the United States was originally licensed by the NRC to operate for a 40-year period.

Upgrades and modifications to nuclear plants have made it feasible to extend the operating period for an additional twenty years with approval from the NRC.

In 2004, Exelon Nuclear was granted a 20-year operating license extension for both units at Quad Cities Station. This extends the operating period of the plant until 2032. In 2014, Quad Cities Station began its 41st year of power generation

The station also operates the only privately owned fish hatchery on the Mississippi River. In the 1970s, the station operated a three-mile long spray canal that was used for cooling plant's circulating water supply.

In 1983, the conversion to a direct-cycle circulation system left this canal unused. Following agreements with state agencies and other interested parties, the canal was converted into a fish hatchery facility in conjunction with a partnership with Southern Illinois University.

Today, the canal and associated fish laboratory produce walleye and hybrid striped bass for stocking purposes in the Mississippi River and other bodies of water in Illinois and Iowa. The station fish hatchery is also raising alligator gar as part of a project with the Illinois Department of Natural Resources.

Since 1983, the Quad Cities Fish Hatchery has stocked over 7 million fish in local waters throughout Illinois and Iowa.
